

# CRYSTAL REPORT

For Visual Basic 2010 w/ SSMS

# What is SAP Crystal Report?

SAP Crystal Reports can help you analyze your data by creating richly formatted, pixel-perfect, and multipage reports from virtually any data source, delivered in over a dozen formats.

# Why Crystal Report?

## **Pixel-perfect documents**

- Provide pixel-perfect documents and forms with highly formatted contents

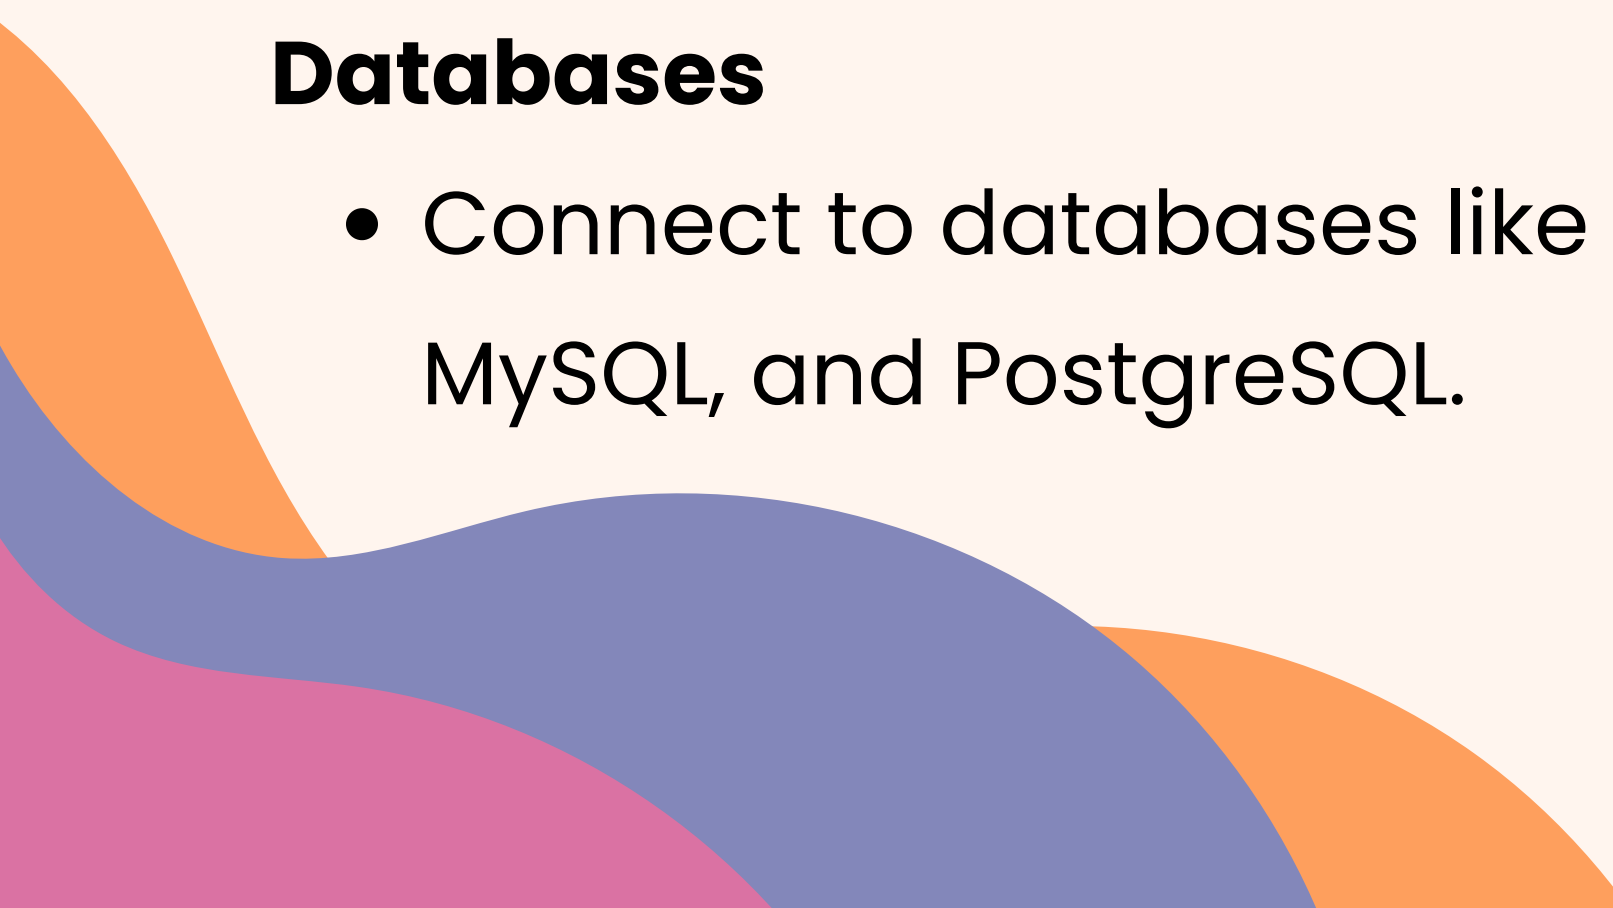

## **Defined user rights**

- Manage user rights to access, view, refresh, export, or print reports.

## **Flat files**

- Connect to flat files like Microsoft Excel, text files, PDF, XML, and file systems.

## **Databases**

- Connect to databases like Microsoft Access, Microsoft SQL Server, Oracle, MySQL, and PostgreSQL.
- 

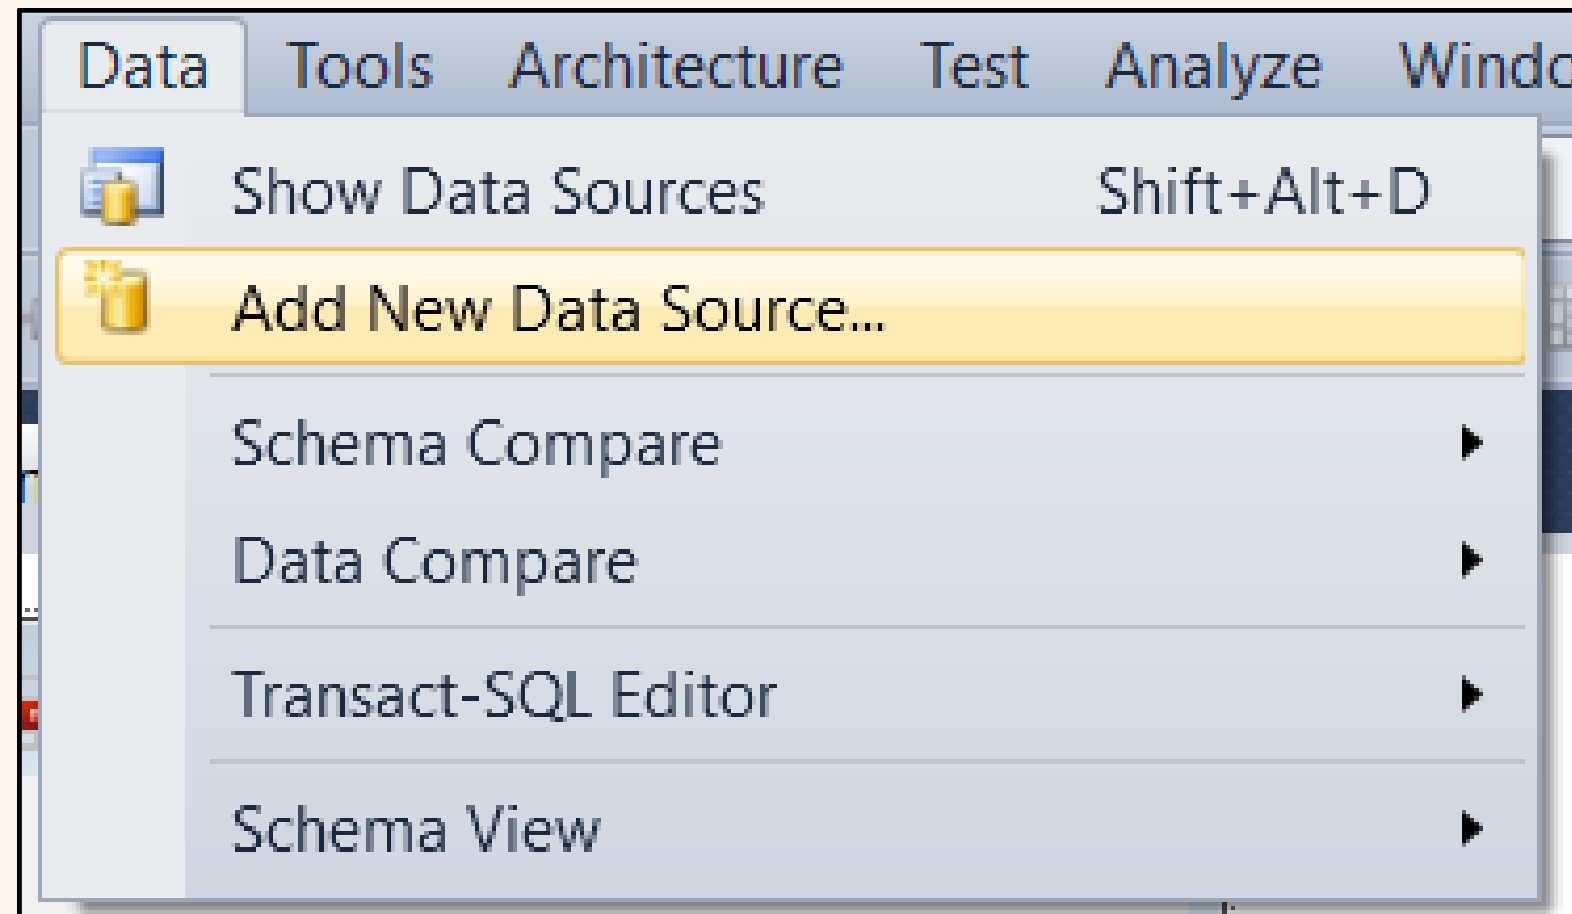

# Start using

## Crystal Report

# Create Data Set

Go to **Data** tab > **Add New Data Source...**

then **Database** > **Dataset** and  
Click on **New Connection...**

**Which data connection should your application use to connect to the database?**

laptop-1clifqed\sqlexpress.DBCrud.dbo

New Connection...

# Create Data Set

Choose '**Microsoft SQL Server**' as your Data Source

Input your **Server Name**

Select your **Database**  
then click **OK**

Add Connection

Enter information to connect to the selected data source or click "Change" to choose a different data source and/or provider.

Data source:  
Microsoft SQL Server (SqlClient) Change...

Server name:  
LAPTOP-1CLIFQED\SQLEXPRESS Refresh

Log on to the server

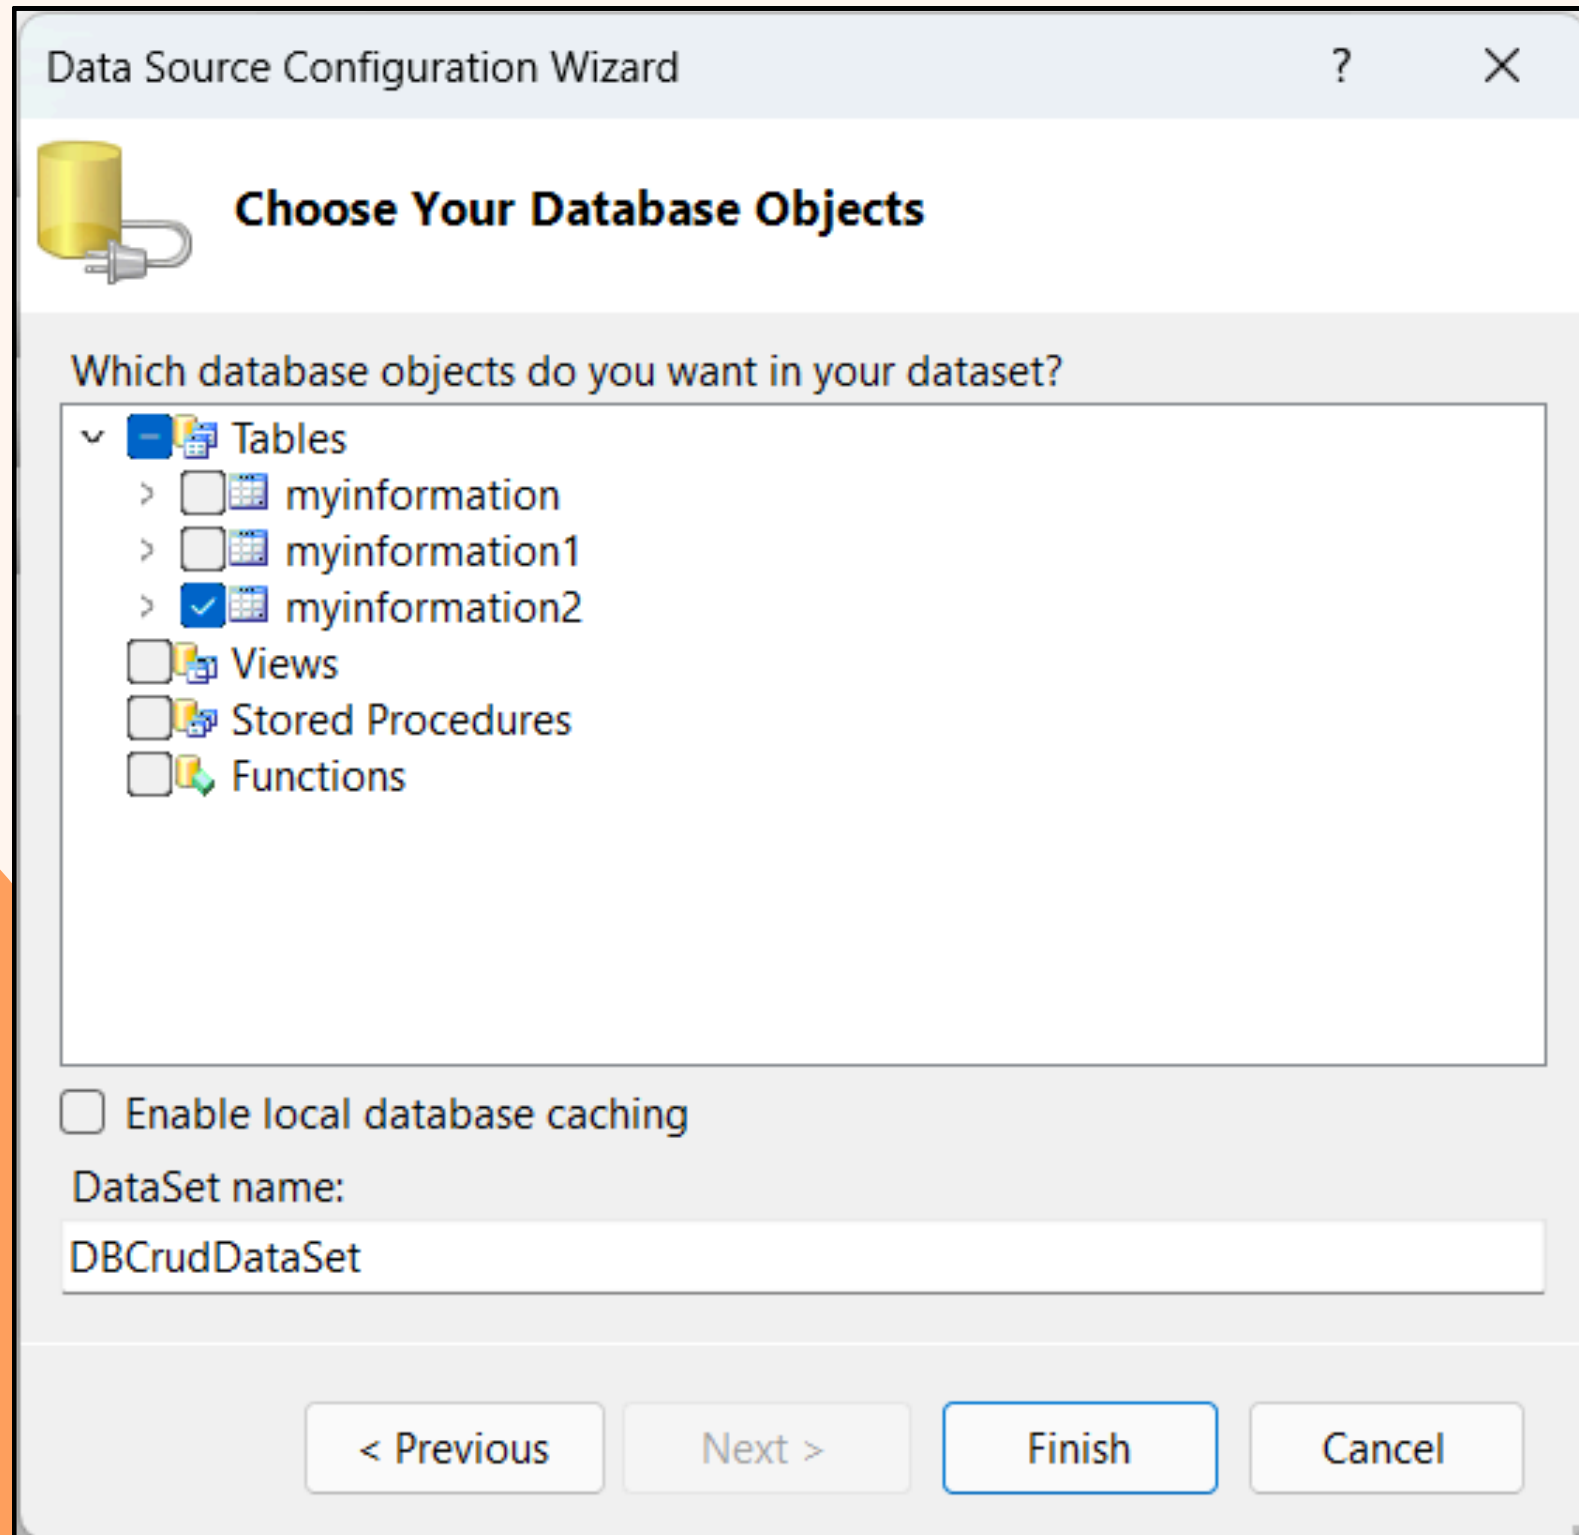

☒ Use Windows Authentication  
☐ Use SQL Server Authentication

User name:   
Password:   
☐ Save my password

Connect to a database

☒ Select or enter a database name:  
DBCrud  
DBModule

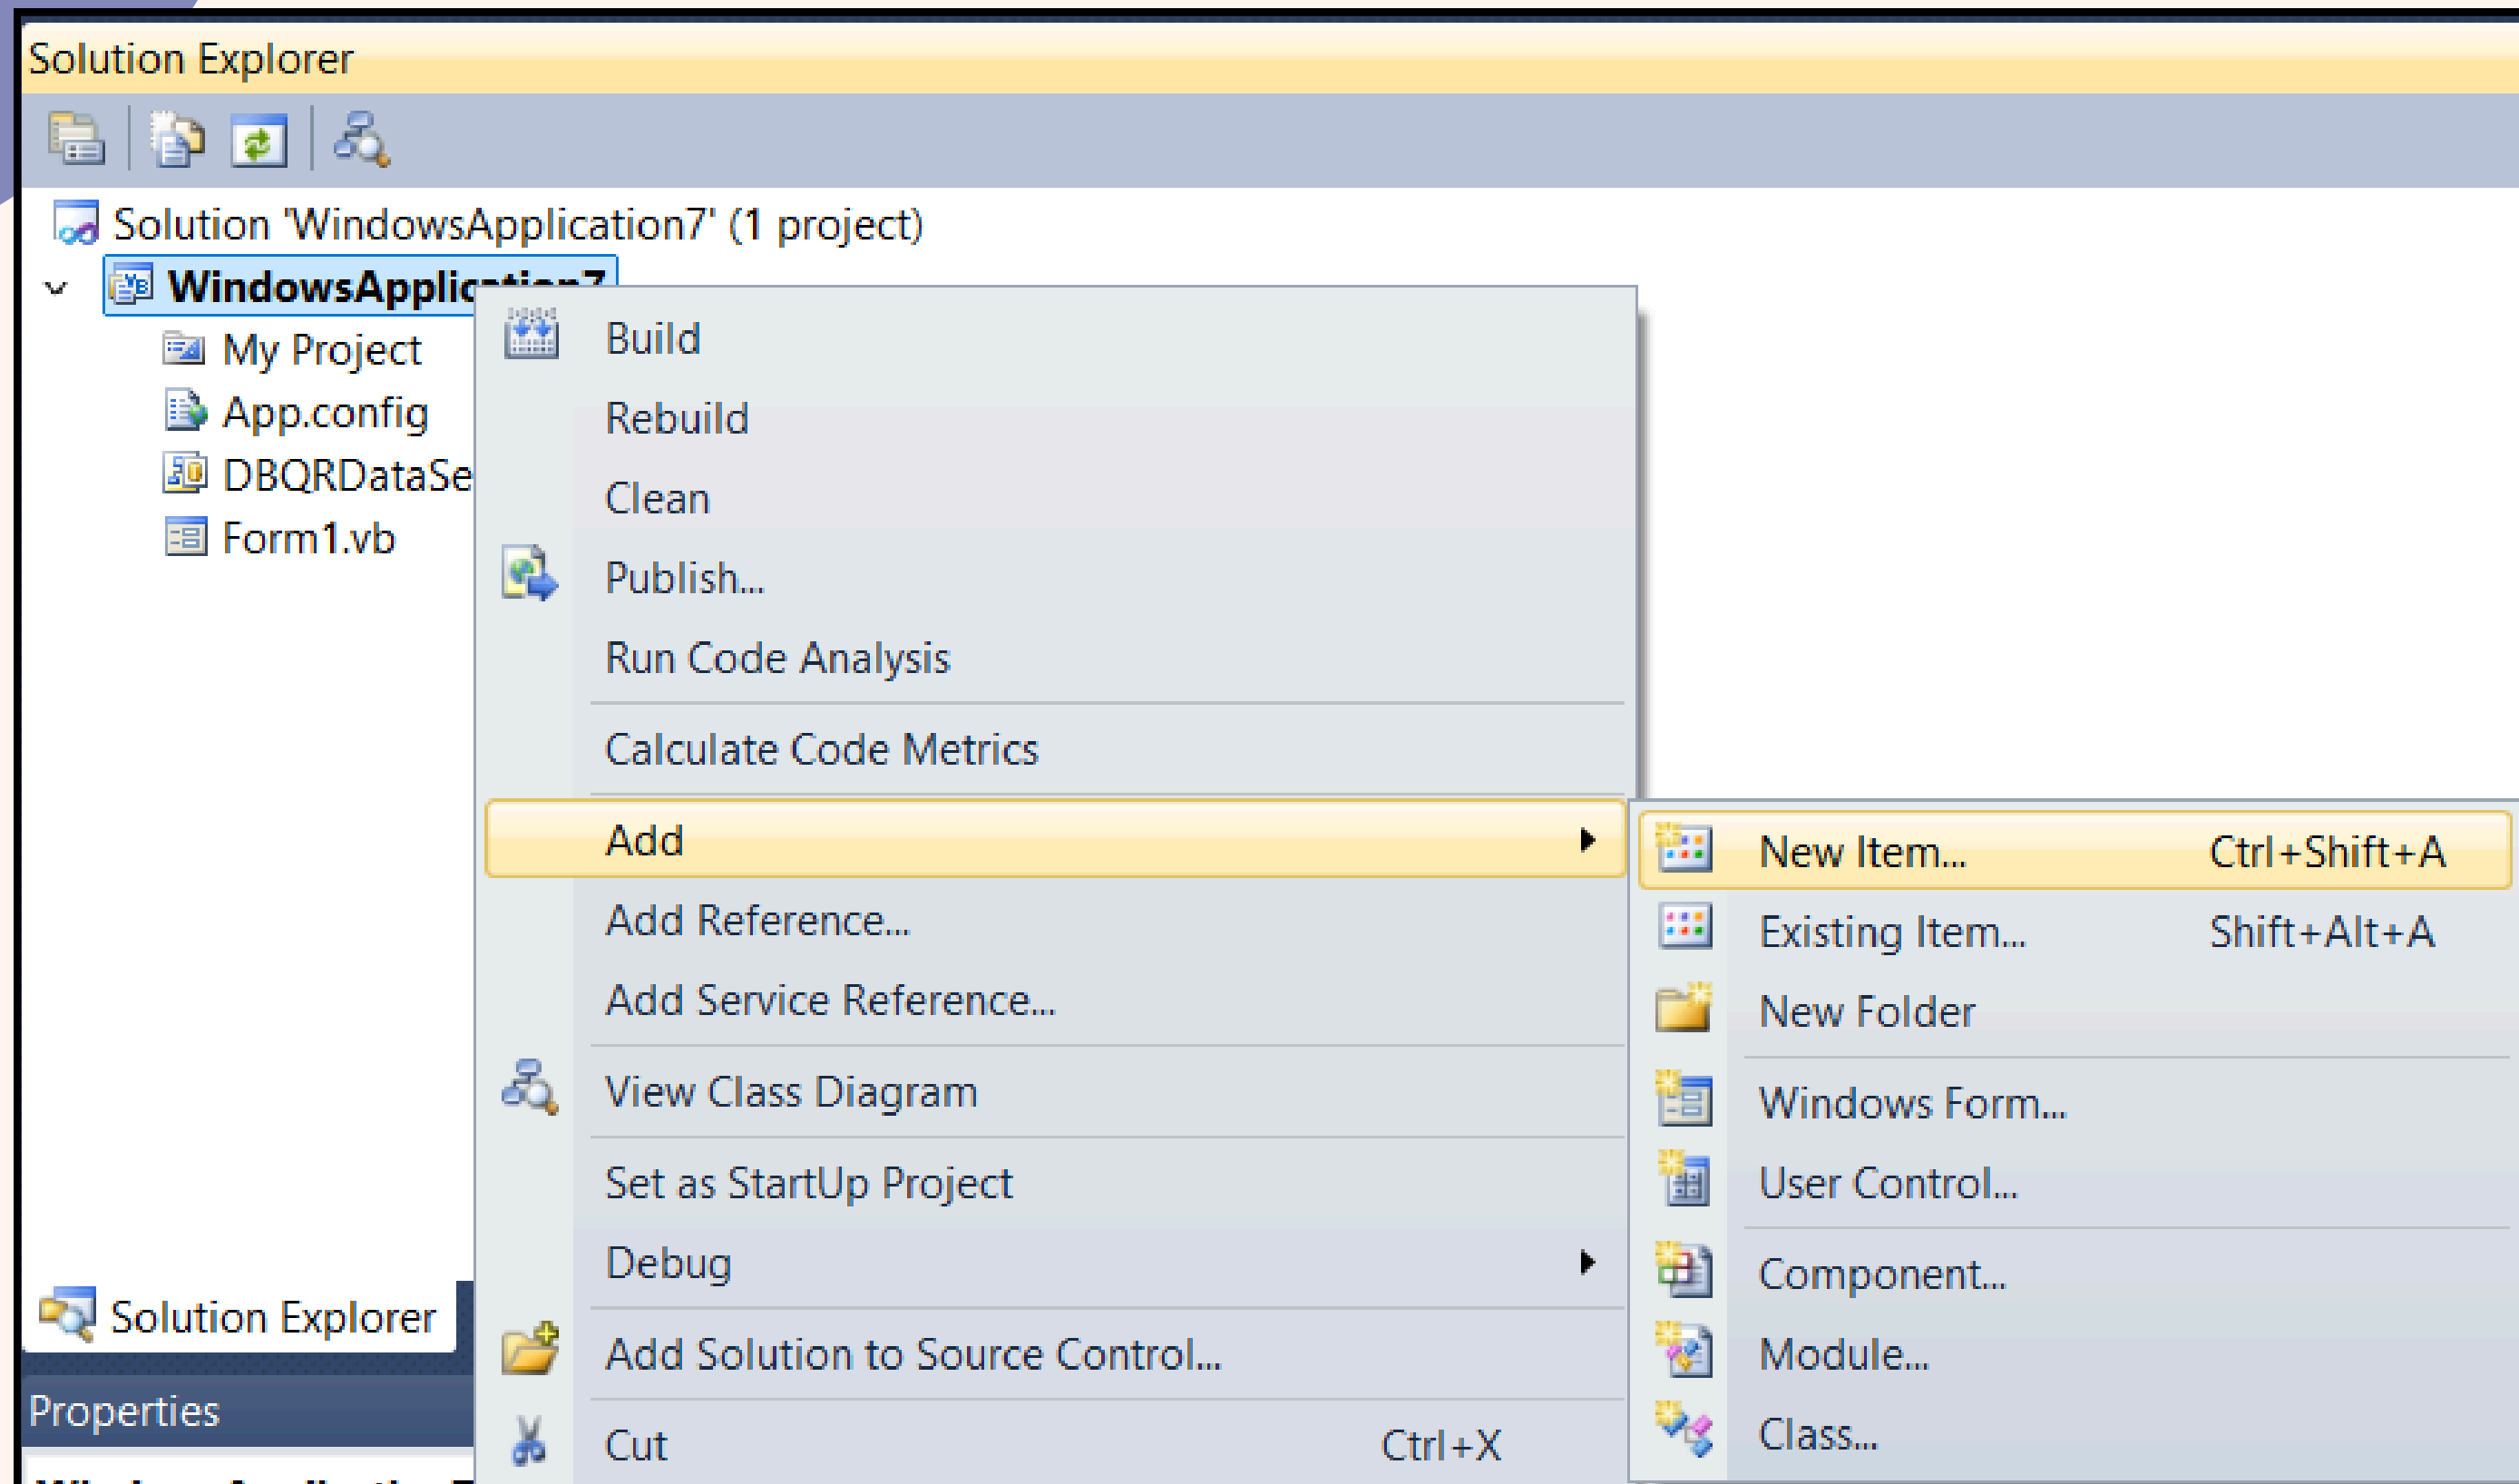

# Create Data Set

Select your **Table** in the Database  
then click **Finish**

 DBCrudDataSet.xsd

# Creating Crystal Report and Importing DataSet

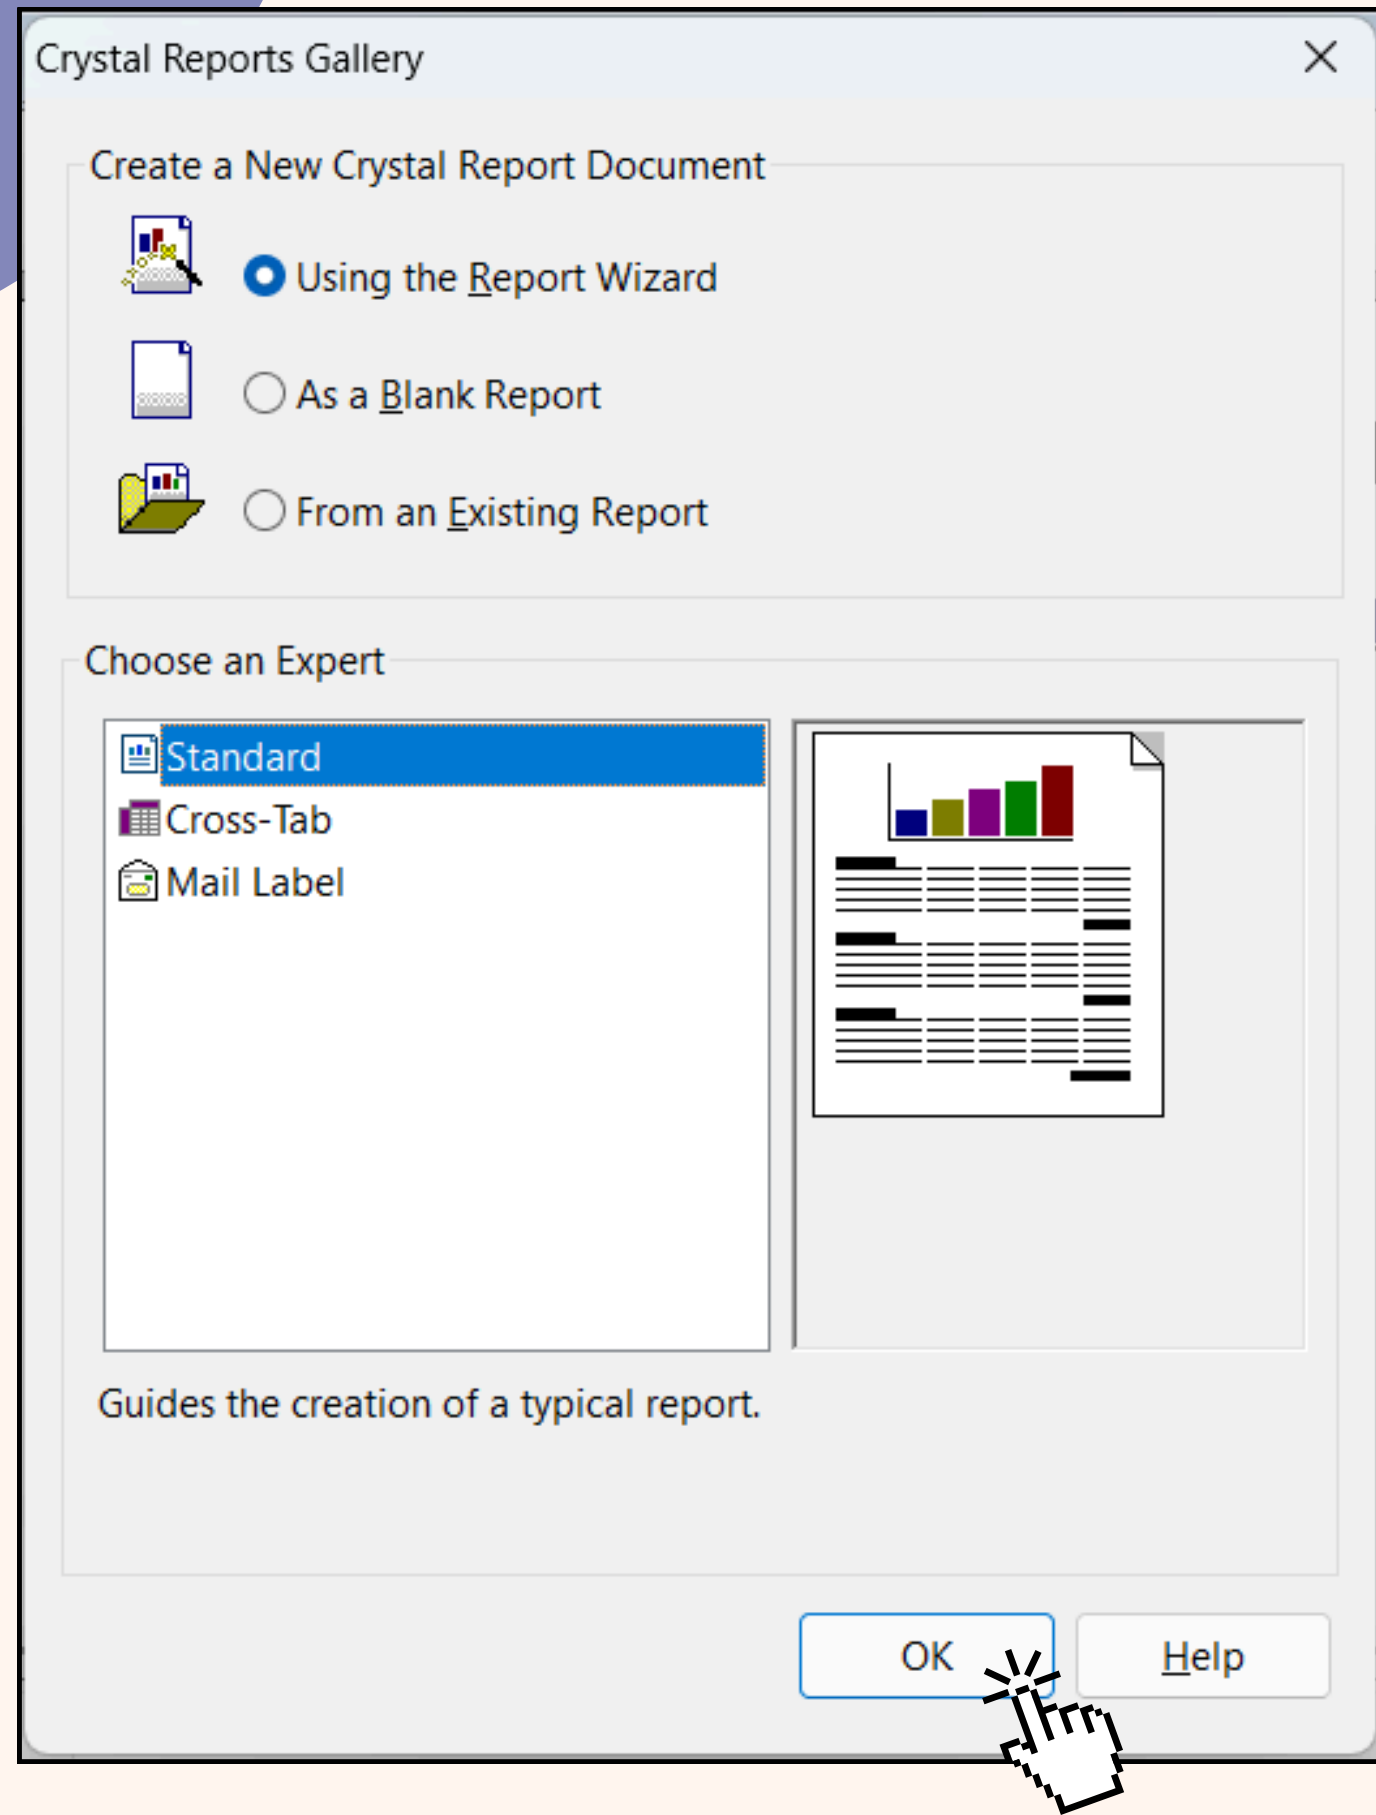

# Creating Crystal Report and Importing DataSet

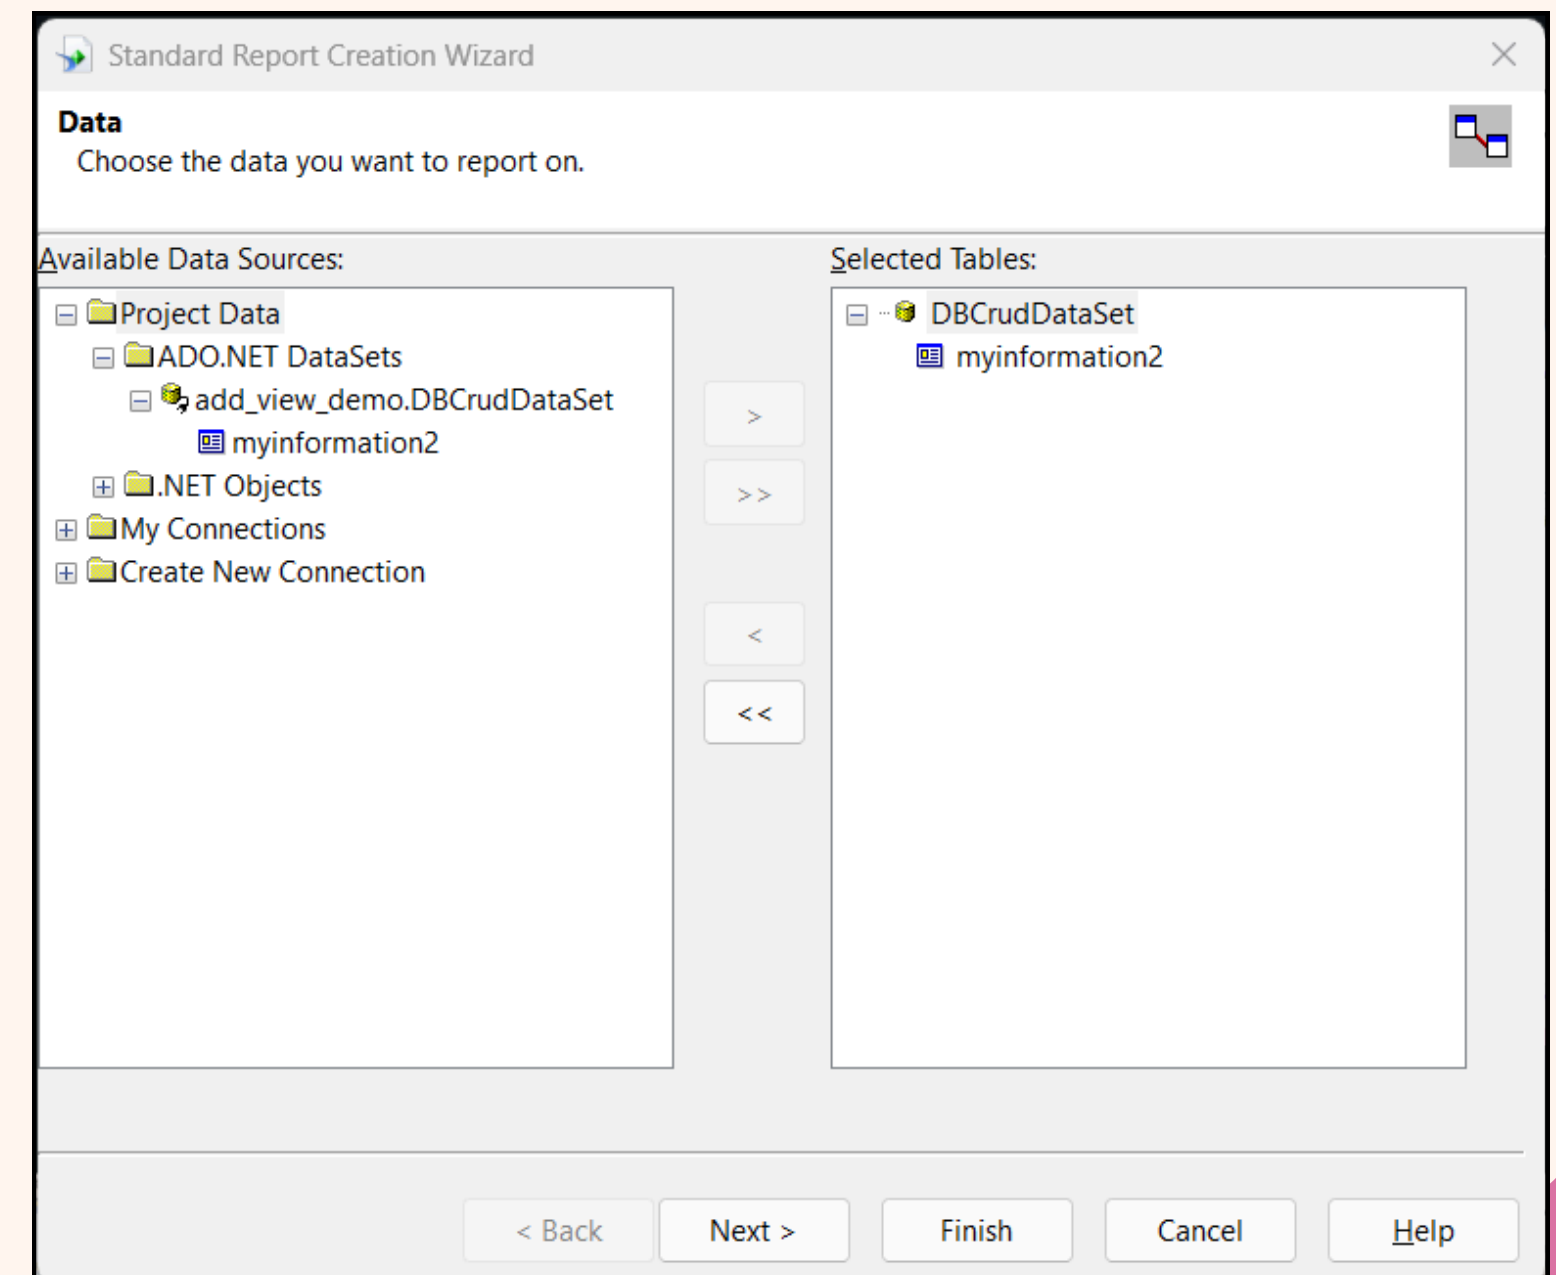

Go to **Reporting** then  
Add **Crystal Reports**

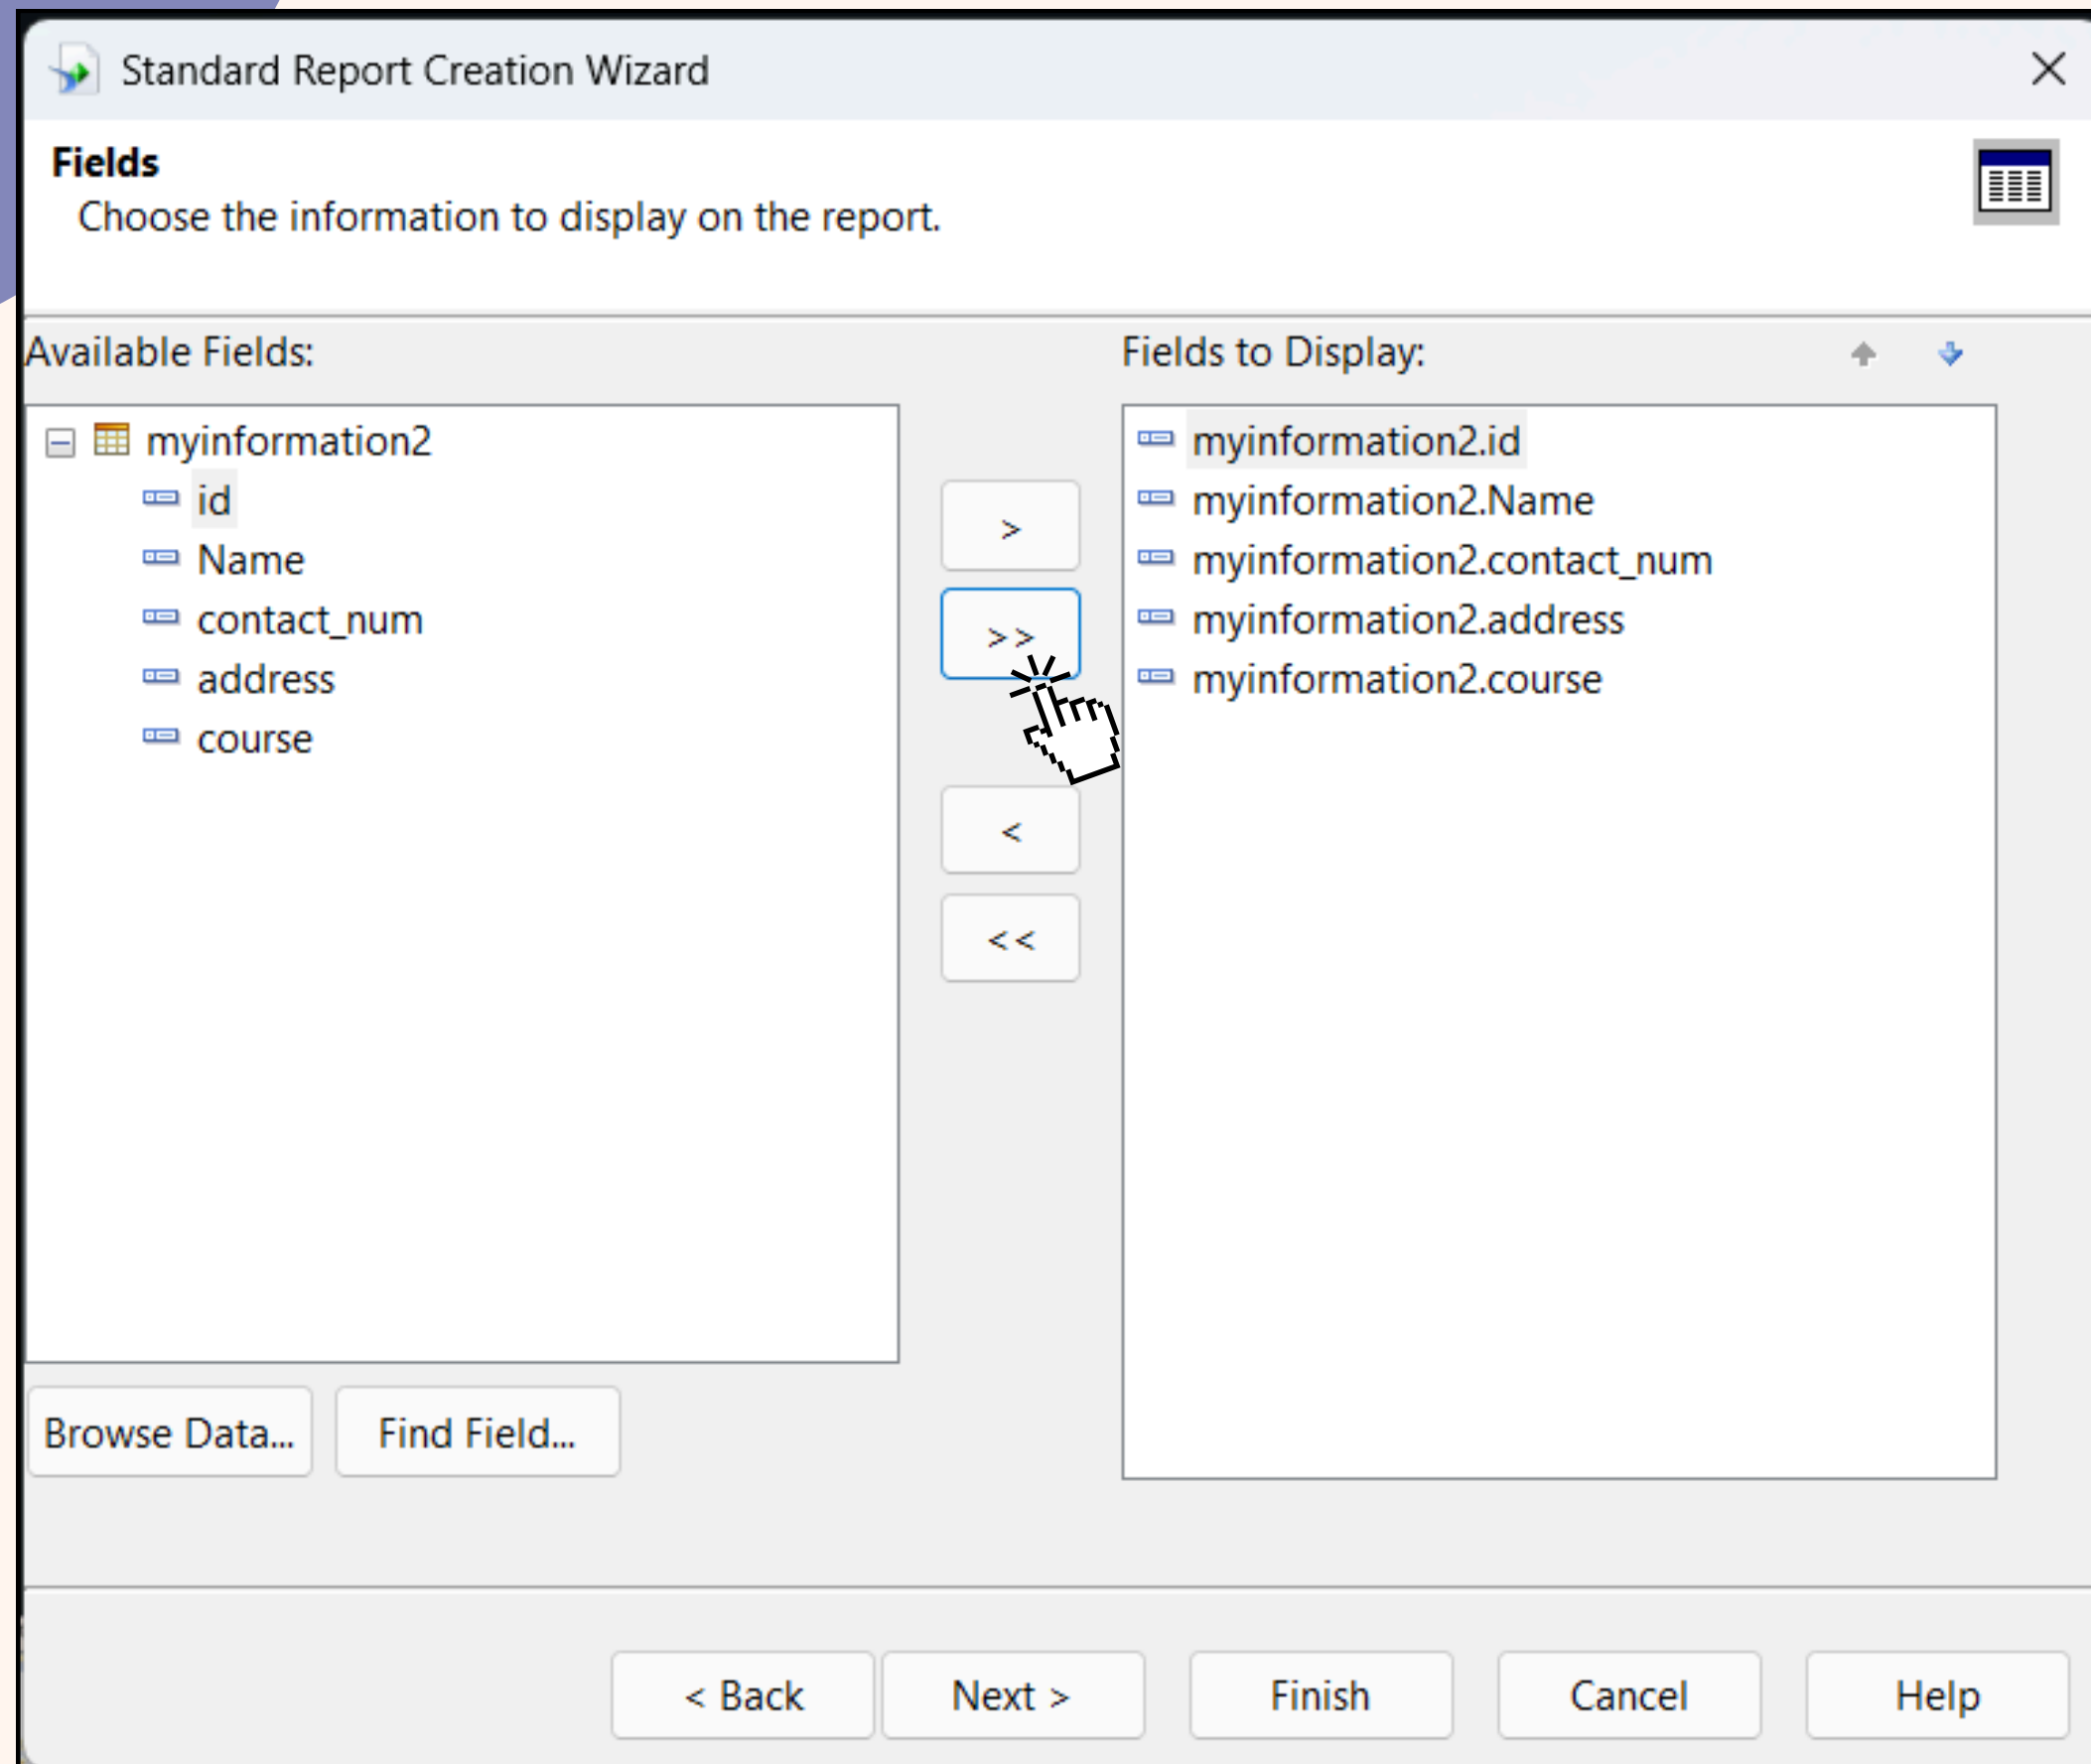

# Creating Crystal Report and Importing DataSet

Import the DataSet that we created earlier.

# Creating Crystal Report and Importing DataSet

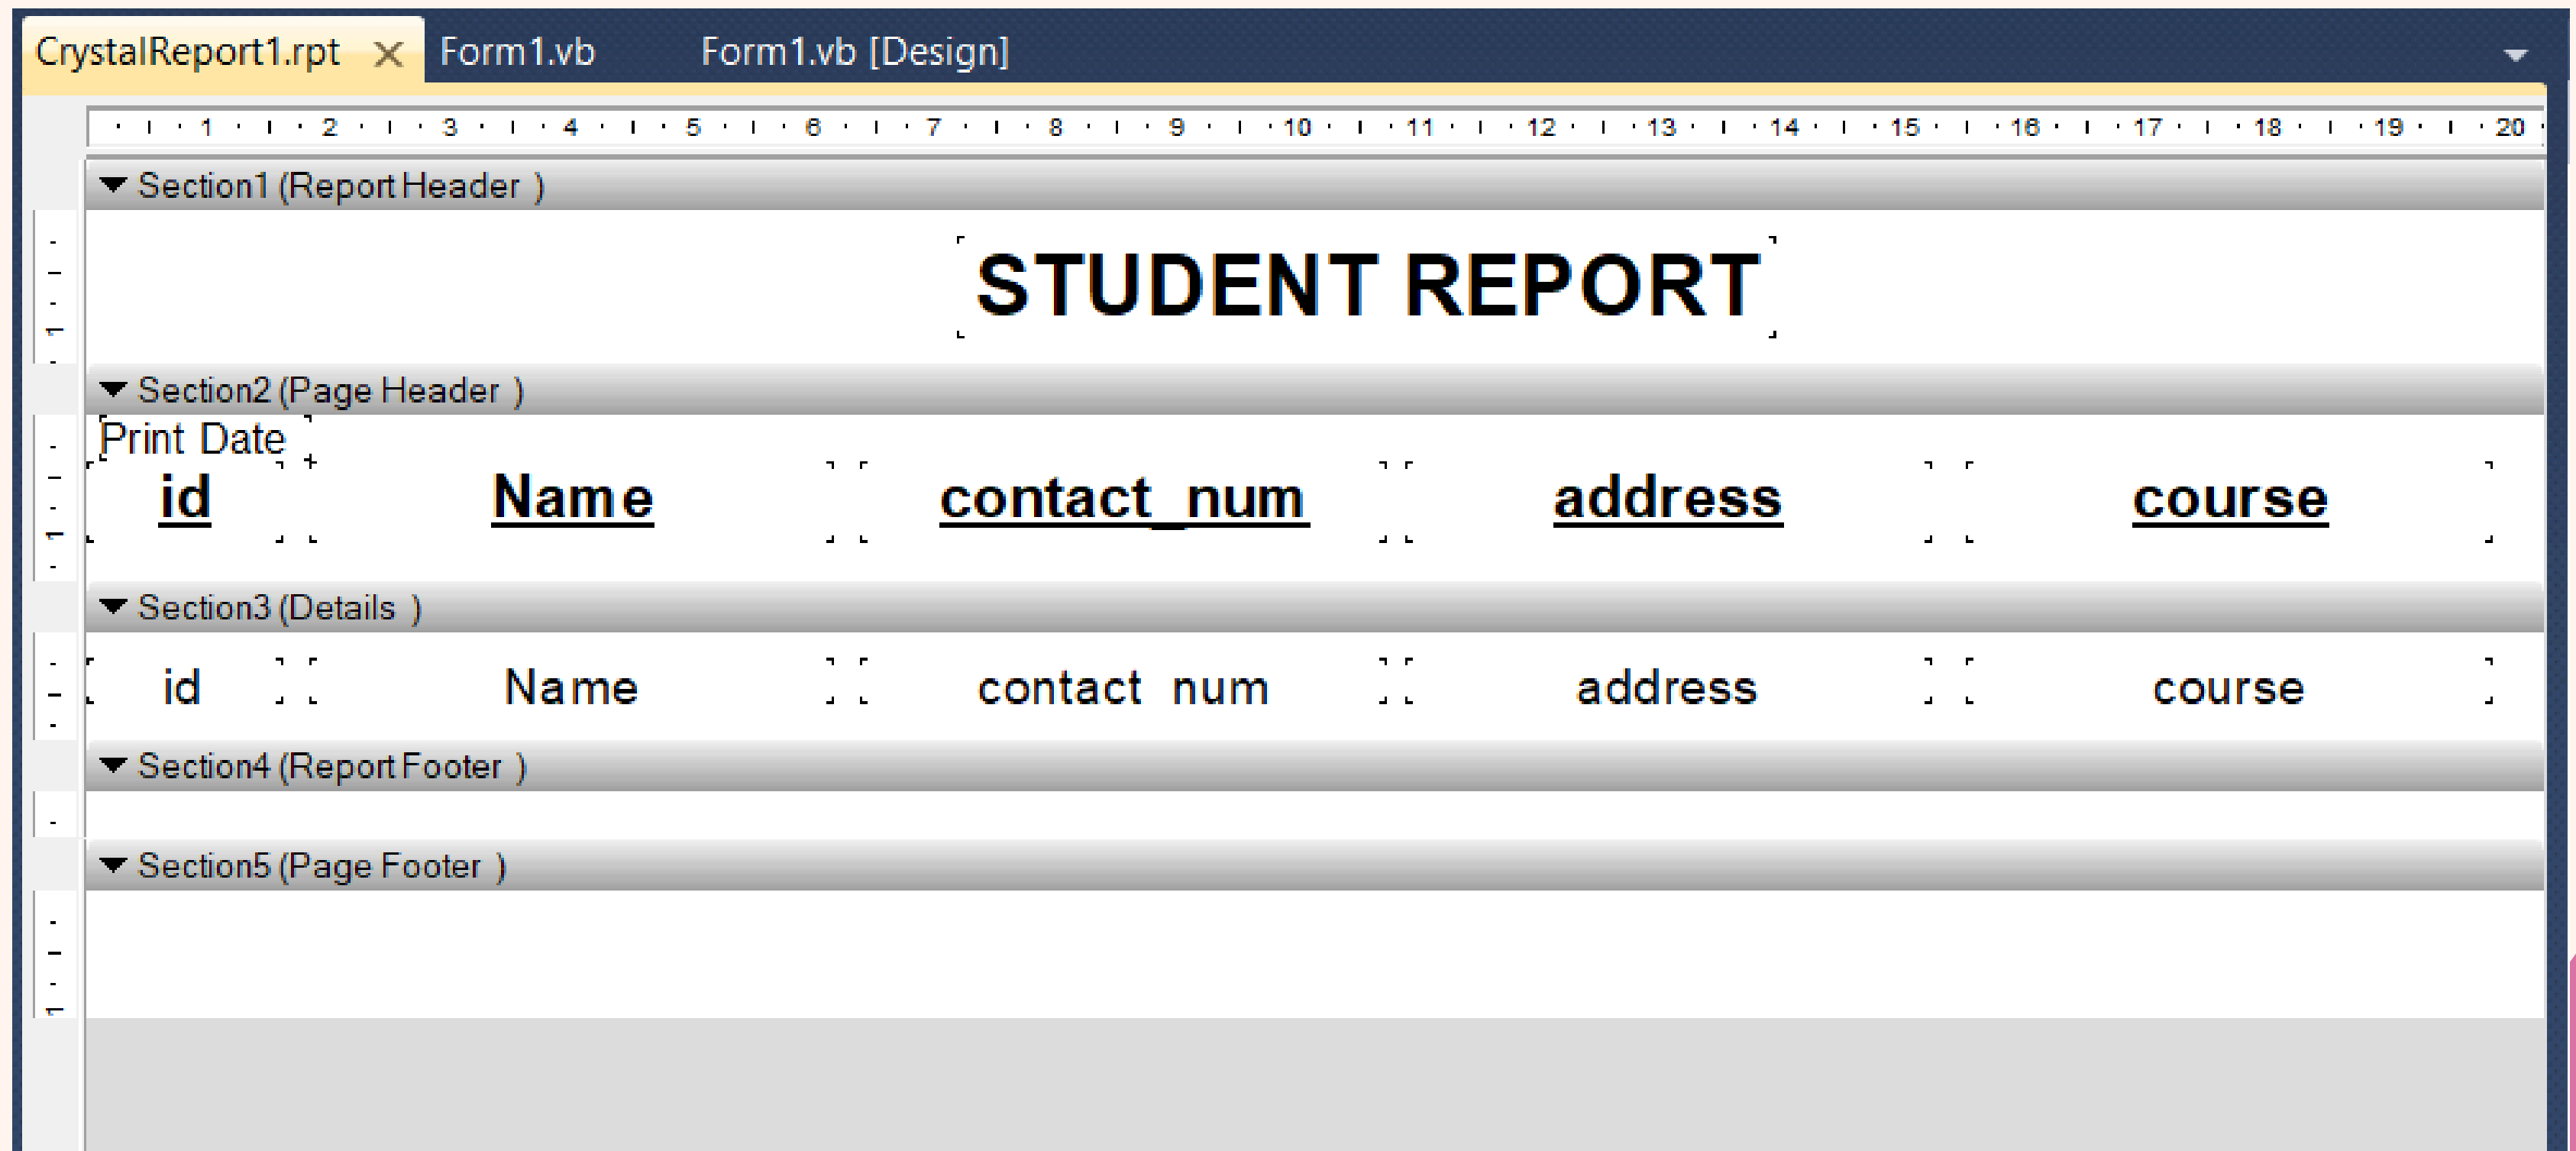

Click on **Finish** after importing all the columns

# Creating Crystal Report and Importing DataSet

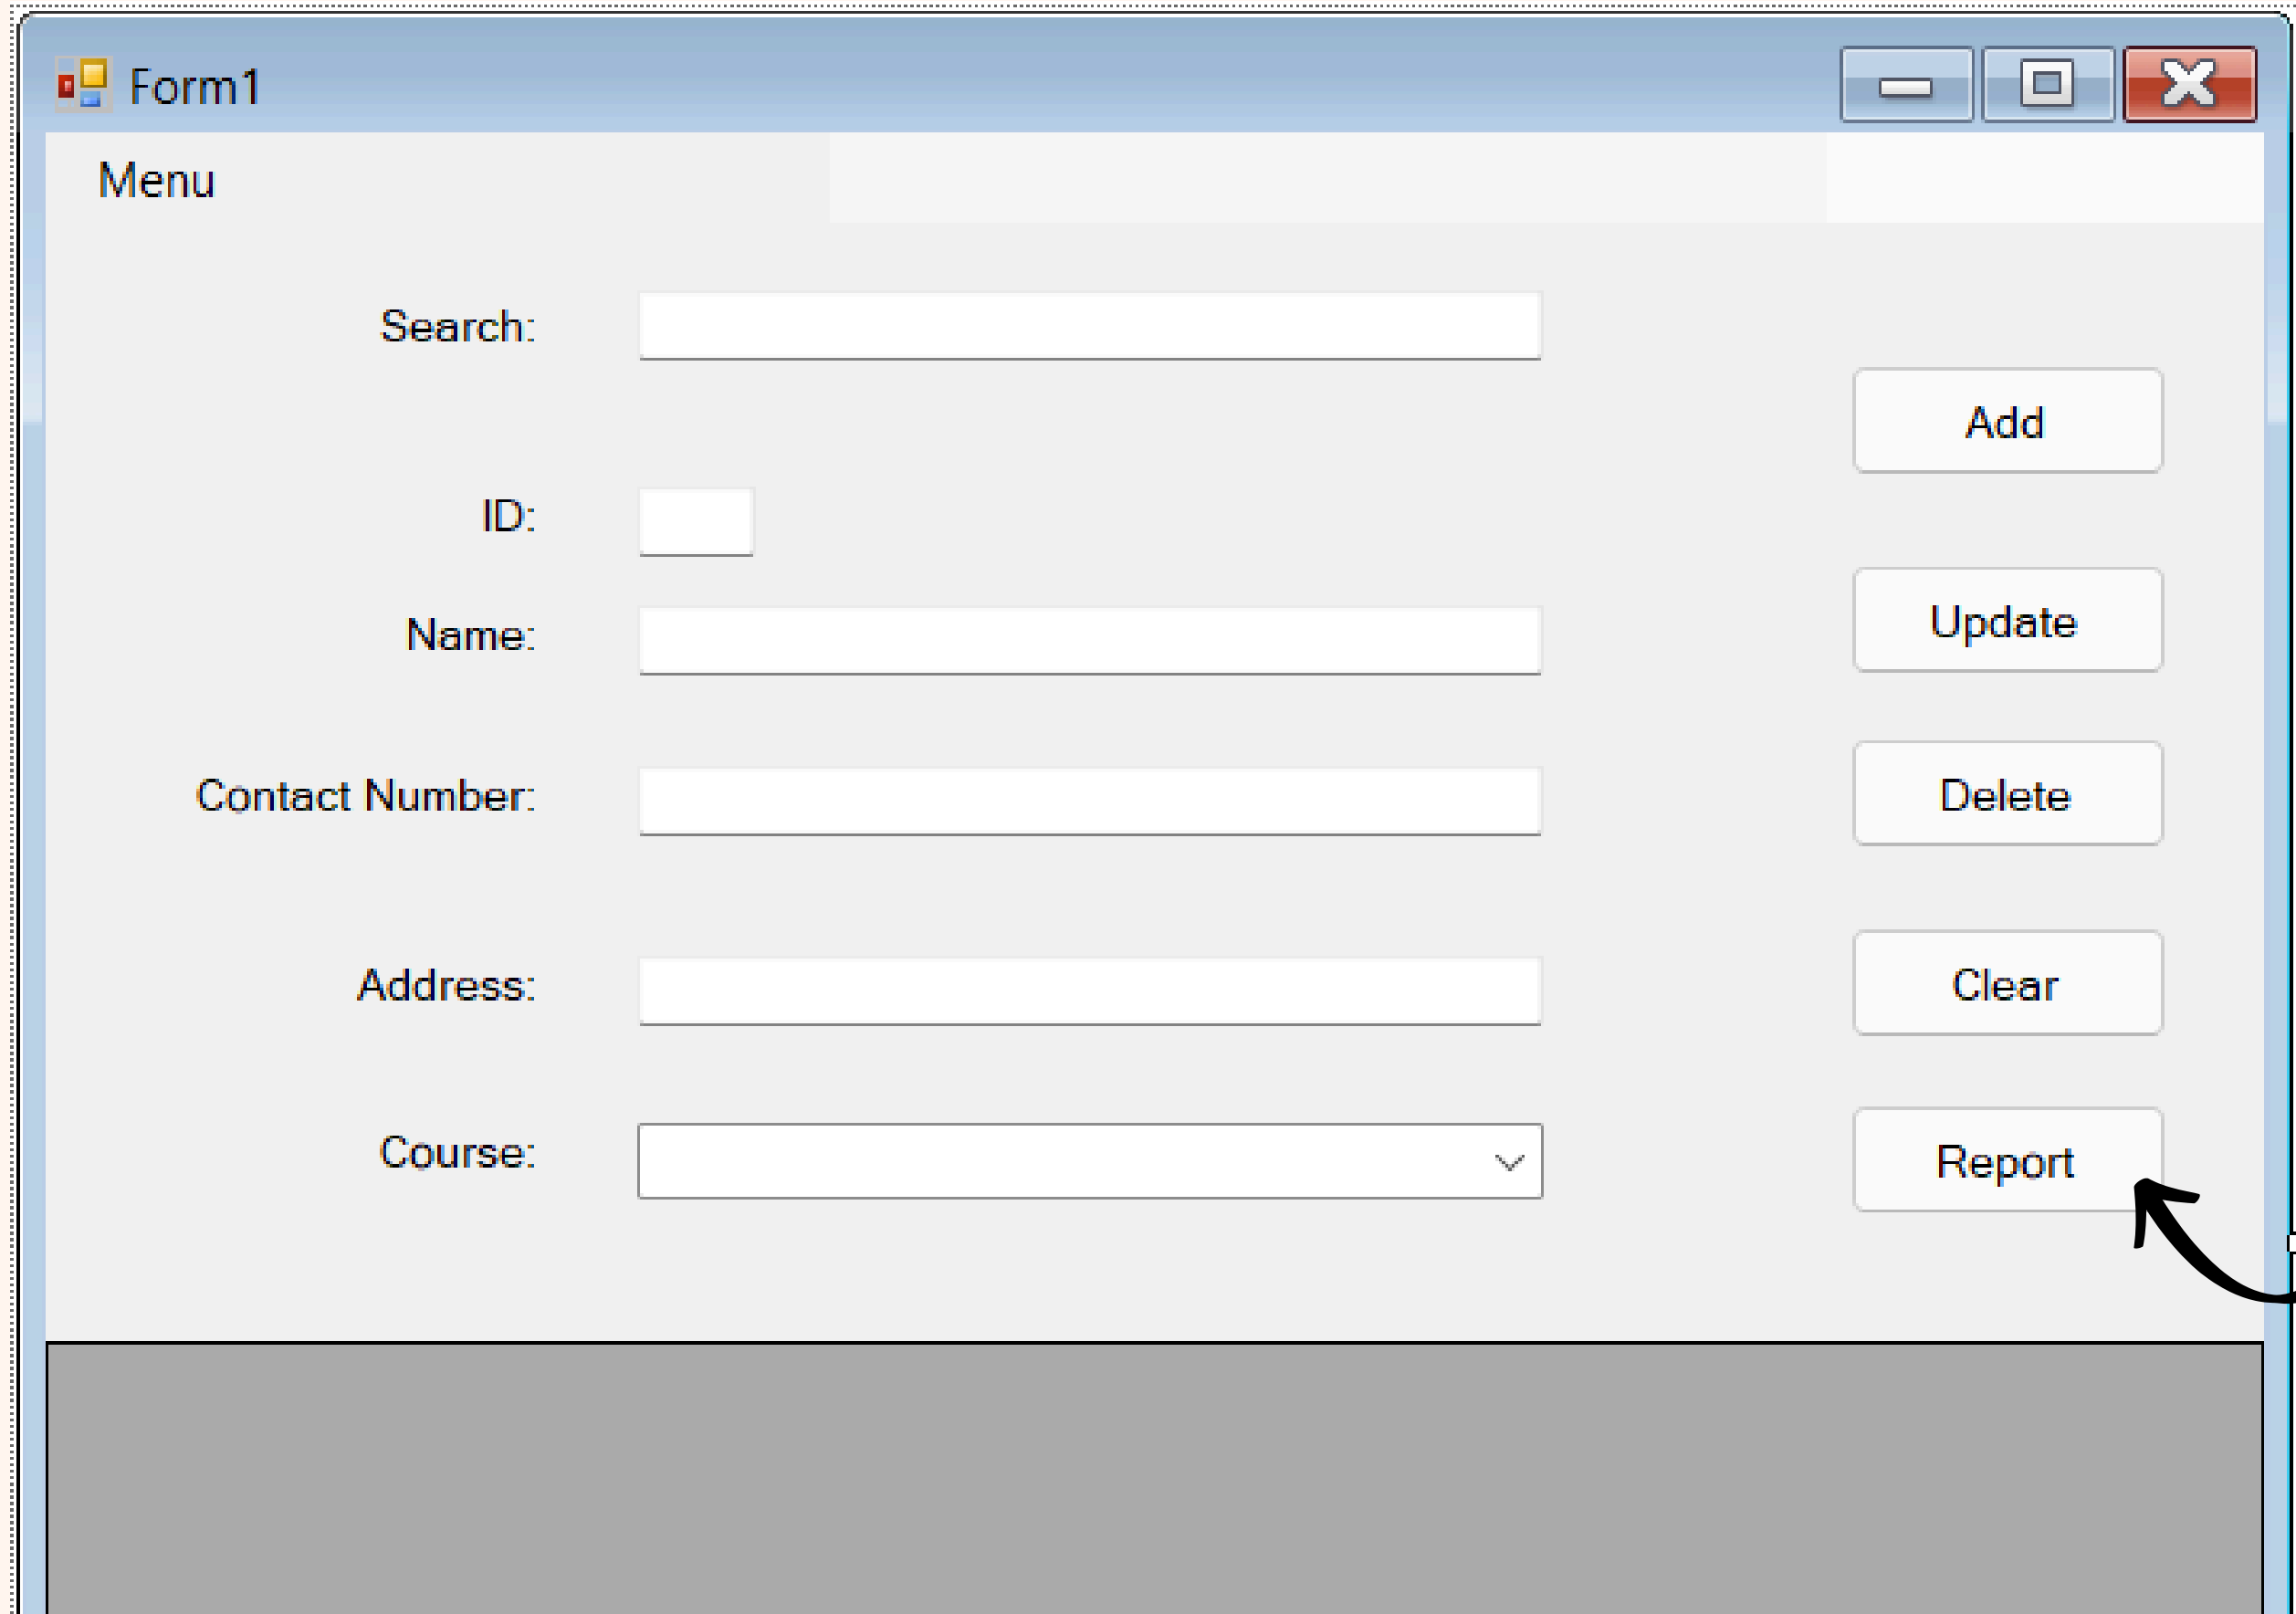

This is the page where data will be display. you can customize it however you like.

# Coding

# USER INTERFACE

The image shows a Windows application window titled "Form1". The window has a standard Windows title bar with minimize, maximize, and close buttons. Below the title bar is a menu bar with a single menu item labeled "Menu". The main area of the form contains several input fields and buttons. On the left side, there are labels for "Search:", "ID:", "Name:", "Contact Number:", "Address:", and "Course:". Each label is followed by an input field. The "Search:" field is a long text box. The "ID:" field is a short text box. The "Name:", "Contact Number:", and "Address:" fields are medium-length text boxes. The "Course:" field is a dropdown menu. On the right side of the form, there are five buttons: "Add", "Update", "Delete", "Clear", and "Report". The "Report" button is highlighted with a black arrow pointing to it from the text "btnReport" located outside the window.

btnReport

# Coding

Start by creating another **Form**

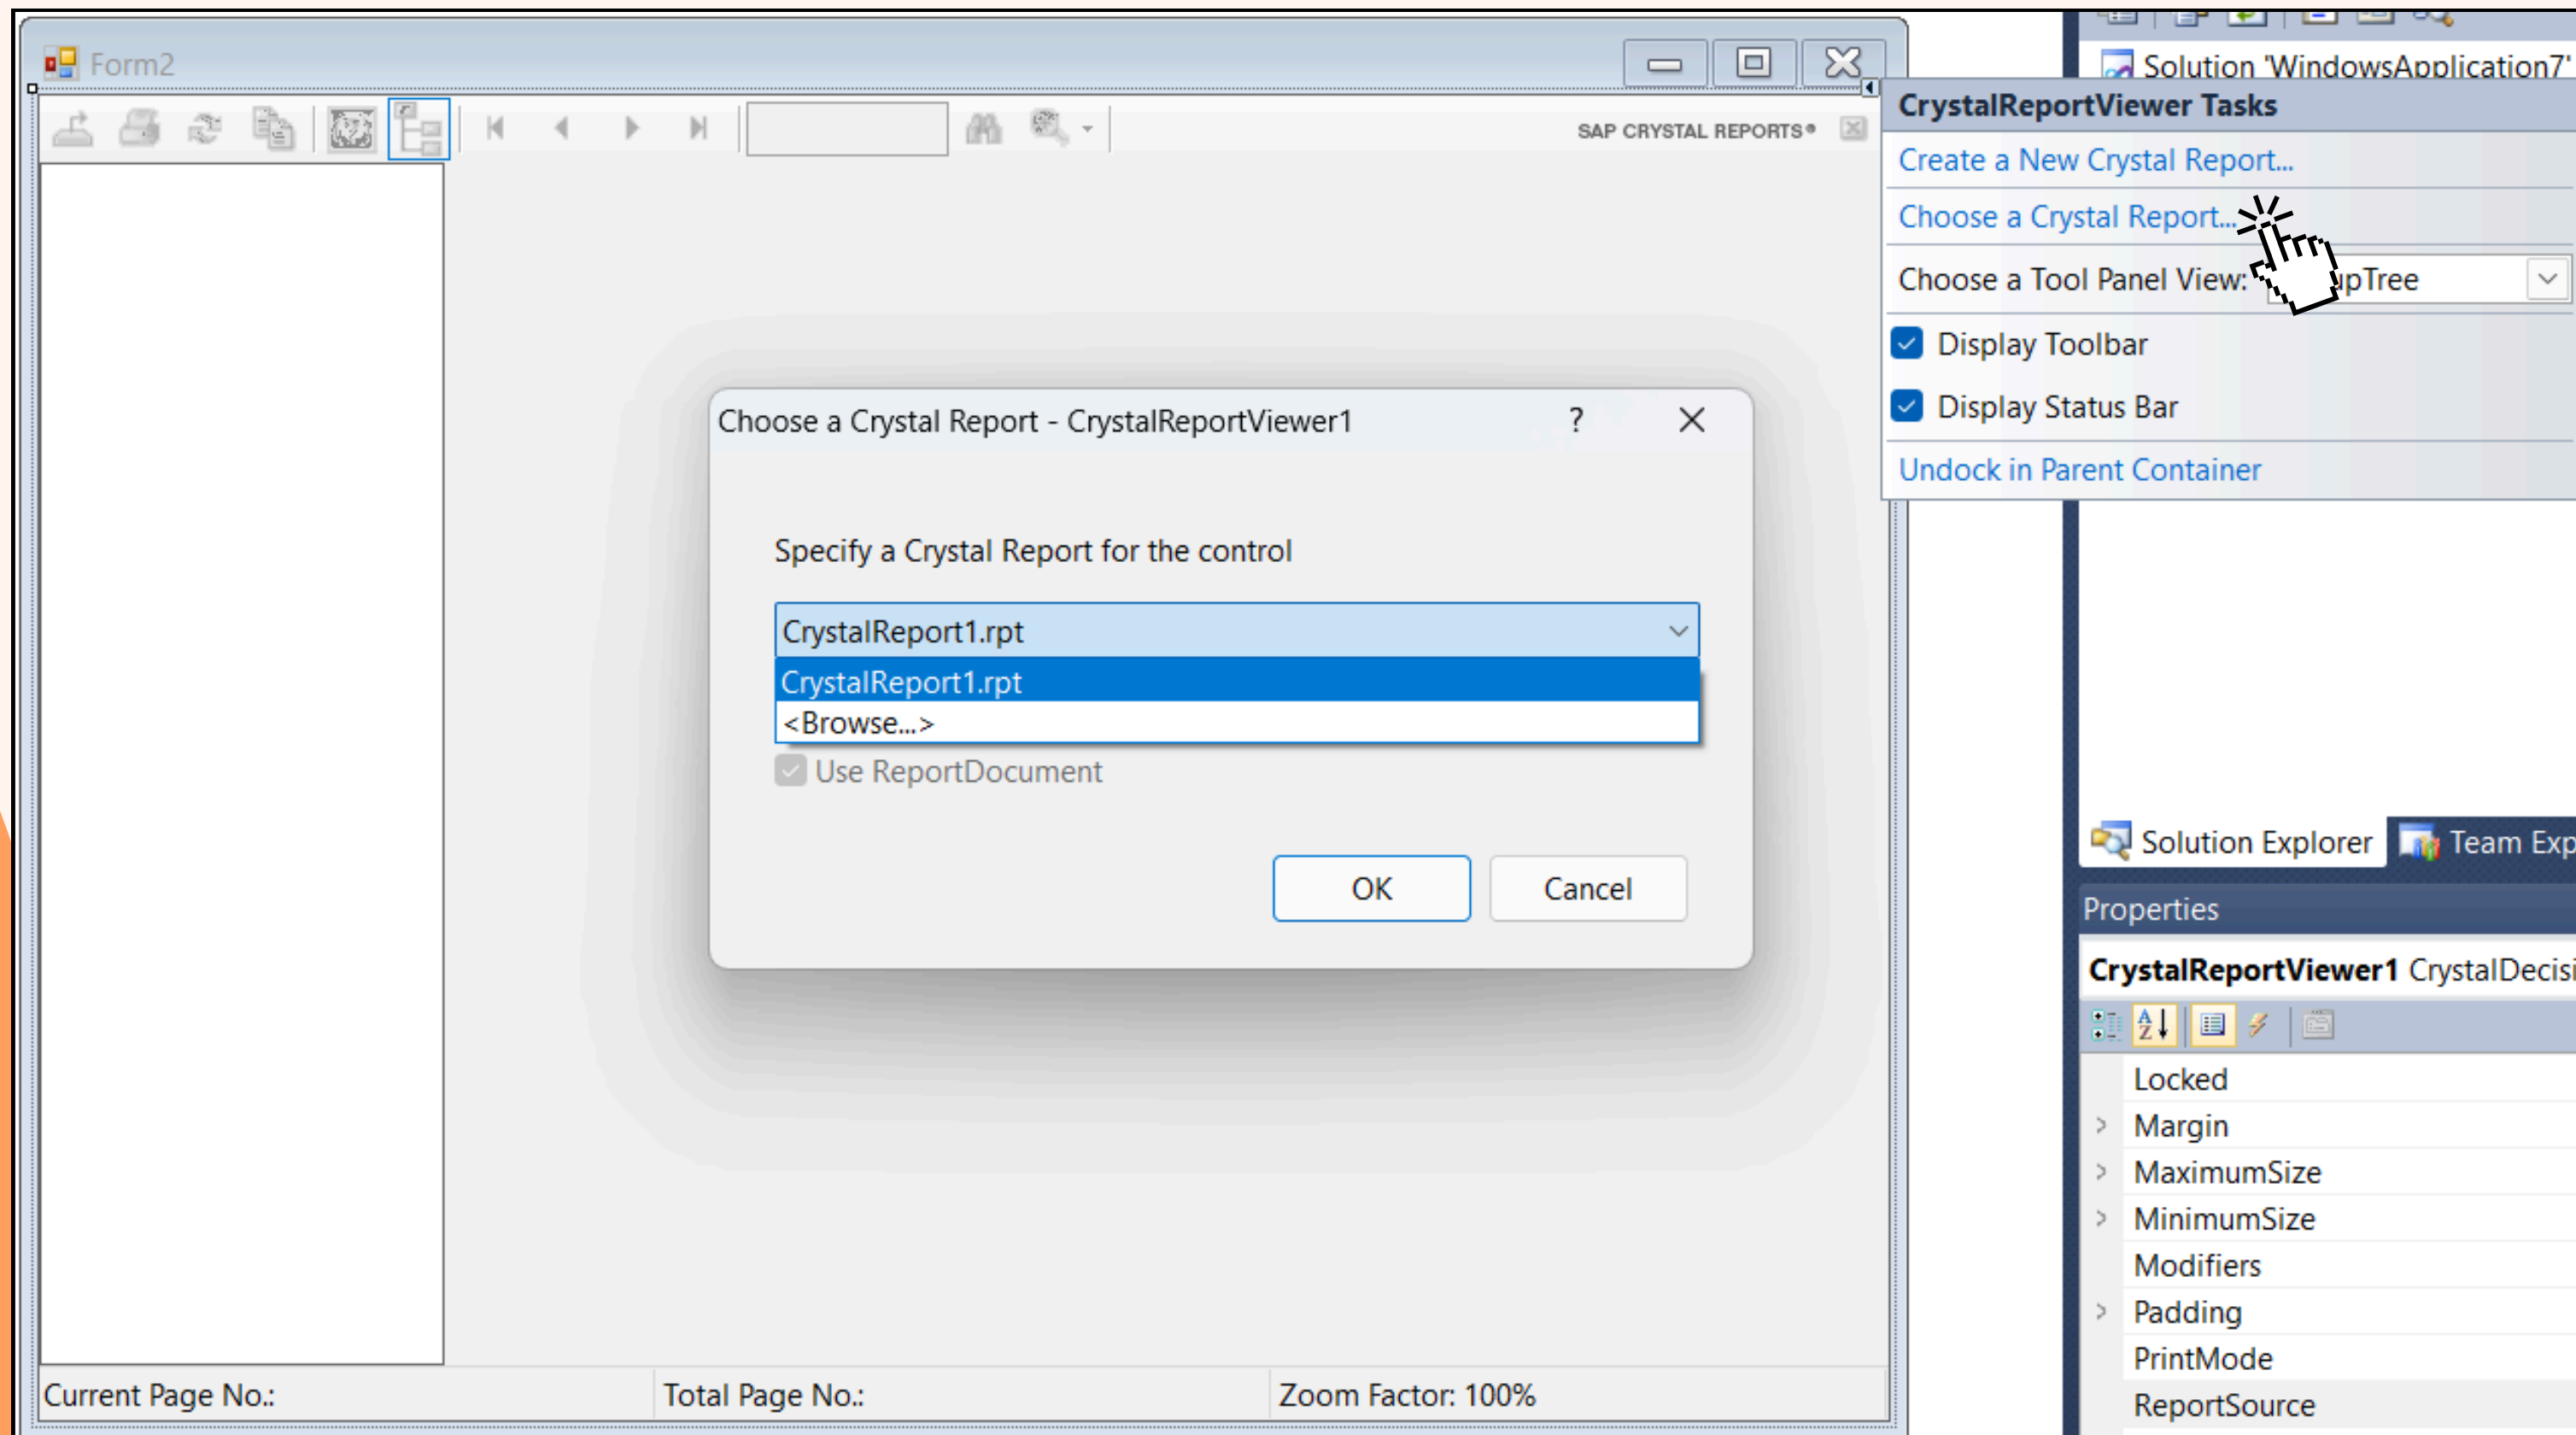

On **Reporting** Tab in the toolbox, Drag the **'CrystalReportViewer'** into our Form2

# Coding

Import the Crystal Report that we have created earlier to the **CrystalReportViewer1**

# Coding

btnReport codes:

```
Private Sub btnReport_Click(ByVal sender As System.Object,  
    Dim report As New CrystalReport1  
  
    report.SetDataSource(dgvInfo.DataSource)  
    Form2.CrystalReportViewer1.ReportSource = report  
    Form2.CrystalReportViewer1.Refresh()  
    Form2.Show()  
End Sub
```

# RESULT - Crystal Report
